## Press Release

### Safety Power Inc. Awarded New Contract for Demand Response Power Project

#### New ecoCUBE® System order for the Largest City in the USA

San Jose, California, January 4, 2016 – Safety Power Inc. announced today it has received a new order for their patented [ecoCUBE®](#) SCR system. This order represents two (2) megawatt of diesel power generation used in a demand response application for the City's largest utility demand generation program. The emissions equipment will remove NOx, CO and PM while providing critical grade silencing all in one component. This project is for a stationary diesel engine that requires the use of after-treatment exhaust cleaning systems to meet or exceed the local environmental emissions requirements for this area. Safety Power's product was chosen because of the small footprint and the proven reliability of the [ecoCUBE®](#) systems based on similar applications in North America. The ecoCUBE® will be mounted on the rooftop of a tall building in the financial district of the City. This order is scheduled for delivery in the 1<sup>st</sup> quarter of this calendar year. Several more orders are projected in this same area in the first half of 2016.

#### About Safety Power Inc. (SPI)

Safety Power is the leading manufacturer of emissions control systems for large diesel and natural gas engines. The technologies include Selective Catalytic Reduction (SCR) systems, oxidation catalyst, diesel particulate filters and silencing that can all be integrated into one cube shape named the [ecoCUBE®](#) product line. The [ecoCUBE®](#) product line has been successfully deployed in mission critical applications such as data centers, hospitals, banks, and municipal utilities applications. In addition to these areas, Safety Power markets to power generation (stand-by, demand-response, peak-shaving), combined heat and power (CHP), marine and industrial applications. Safety Power Inc. has offices in the USA and Canada.
